Helping the Maritime  
Industry to Combat  
Piracy

## Crew Anti-Piracy Course

**Piracy** on the high seas is a historical problem that mariners had to face since the beginning of maritime history. Over the centuries the problem of piracy has gone through circles where at its peak, history has recorded significant pirate activity. According to all available data, over the past few years, piracy appears to be making a significant comeback in the high seas with a notable impact on the world economy, the maritime industry and the mariners that bare the burnt of the problem.

The Crew Anti-Piracy (CAP) course has been developed as a result of the clear need to enhance maritime security awareness and emergency response training on security issues among mariners.

### Why attend this course?

The CAP course provides crews with a basic understanding on the problem of piracy along with training in passive Anti-Piracy prevention measures, effective responses and actions to take in the event of boarding.

### Benefits

The course is designed to help crews understand how to make their vessel a difficult target for pirates. It also intends to enhance crew awareness and confidence on piracy issues so that they can respond successfully to maritime threats in dangerous waters.
